

Massage as the Body's Workout

Can Bodywork Sometimes Make You Sore?

Shirley Vanderbilt

You've just had a wonderful massage, and you go home feeling both relaxed and rejuvenated. But later that night you feel like you're coming down with something. Or perhaps the next morning, you wake up with twinges of muscle soreness, maybe some fatigue, and you just don't feel yourself. What happened? Chances are it's the massage, and it's perfectly OK.

Keith Grant, head of the Sports and Deep Tissue Massage Department at McKinnon Institute in Oakland, Calif., says, "It's very much like doing a workout. If the muscles aren't used to it, they often respond with some soreness." Grant notes this should last for no more than a day or two. If it lasts longer, the

therapist can find all the kinks that have built up from daily stress and too little or too much exercise. The whole point of a therapeutic massage is to release that tension, work out the kinks, and help your body relax so it can function at an optimal level. All of this work stretches muscles, pushes blood into them, and gets things working again.

A Closer Look

There are several theories, in addition to muscle function, as to why people sometimes experience after-effects from massage.

Massage can stimulate the lymph system, which is comprised of several organs

"Be happy for this moment. This moment is your life."

-Omar Khayyam

A good massage can sometimes leave you feeling like you had a good workout.

massage may have been too intense, and the therapist should adjust for this in the next session. However, just as with exercise, when your body adjusts to having this type of workout, your physical response will also be less intense.

A professional massage is more than an ordinary backrub. Your massage

(thymus, tonsils, spleen, adenoids), hundreds of lymph nodes, and a multitude of vessels that run throughout the body. These lymphatic vessels carry a clear fluid, known as lymph, that circulates around the body's tissues, absorbing fluid, waste products, dead cells, bacteria, viruses, fats, and proteins

from the tissue as it goes, while also giving passage to immune cells as they're needed. Massage can sometimes stimulate the lymph system, helping to eliminate toxins from the body. And if the body contains a high level of environmental or dietary toxins, you could feel some mild, flu-like symptoms. While most people come out of a typical massage feeling nothing but relaxed, some people do report feeling a bit nauseous. If this is the case, make sure to drink plenty of water and perhaps take a slow walk. Movement creates a greater lymphatic response and will hurry the process along.

Grant points to another theory being closely examined by experts. Neurological sensitivity, or "sensitization," looks at the "whole response of what's going on in a person." As Grant explains, massage provides a significant amount of input to the central nervous system and the body responds to that increased information. Pain and other occasional after-effects may be the result of a system that has received more information than it can handle at that particular time. And because the amount of sensory input we receive during any day or week is always fluctuating, sometimes we may be overloaded and other times not. It depends on the total stress (emotional, spiritual and physical) being experienced by the body at that moment.

Minimizing Overload

So what can you do to minimize the sometimes uncomfortable side effects? It's important to communicate with your massage therapist regarding your expectations, as well as your current state of health. Your therapist can then tailor the massage to your personal needs and desires, and make adjustments in intensity or technique as the session proceeds. "I'd look at what's being done," says Grant. In some cases, a shorter or more soothing session may be more appropriate. In others, the therapist may need to change the kind of technique used. Much of this can be judged by how the person is feeling and responding during the massage.

In addition to communicating clearly with your practitioner throughout the session, following a few simple steps will help ease tenderness and maximize

benefits:

- UNDERSTAND THAT EVERY BODY REACTS DIFFERENTLY.

Your body is an organism made up of complex systems that react to a constantly changing influx of external factors.

- MAINTAIN GOOD HEALTH PRACTICES.

This means keeping your mind free of negative clutter.

- DRINK PLENTY OF WATER IMMEDIATELY FOLLOWING YOUR TREATMENT.

Continue to do so for the next day or two. This will rehydrate your tissues and ease the effects.

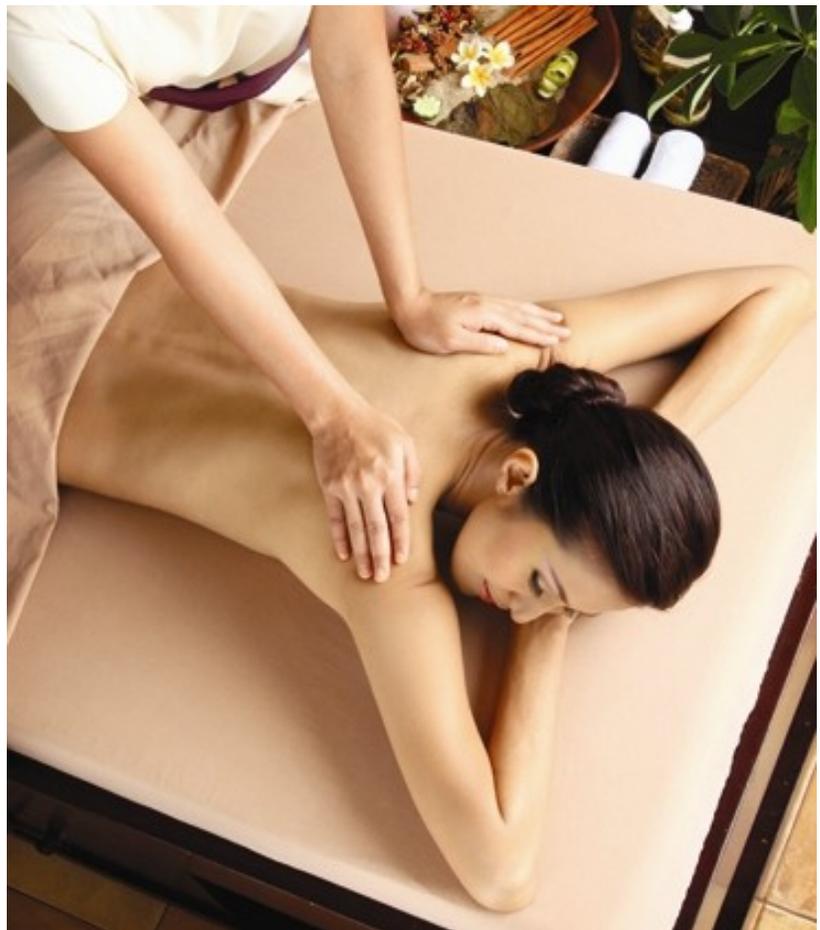

- TAKE IT EASY AFTER YOUR MASSAGE.

Go home, relax and just allow your body to find its balance naturally.

Getting a massage can do you a world of good. And getting massage frequently can do even more. This is the beauty of bodywork. Taking part in this form of regularly scheduled self-care can play a

huge part in how healthy you'll be and how youthful you'll remain. Budgeting time and money for bodywork at consistent intervals is an investment in your health. And remember: just because massage feels like a pampering treat doesn't mean it is any less therapeutic. Consider massage appointments a necessary piece of your health plan, and work with your practitioner to establish a treatment schedule that best meets your needs.

Like exercise, making bodywork a habitual practice is good for your health. And if you wake up the next morning a little sore, it's probably because you had a really good massage.

Bodywork can stimulate the lymph system, which can help detox the body.

Is the Season Getting You Down?

Shine the Light on Winter Blues

In northern climates when the heavy snows fall and the sun moves south, many people find their moods shift from upbeat to downright depressed. The severe form of winter depression--called seasonal affective disorder, or SAD--affects at least two million North Americans. Another thirty-nine million experience milder symptoms of moodiness and extended sleep patterns that somewhat resemble hibernation.

Overeating, sleeping for prolonged periods, mood swings, carbohydrate cravings, and weight gain during winter months may be more than just symptoms of cabin fever. They can suggest a biochemical reaction caused by a lack of exposure to sunlight.

Like all living things, we humans are sensitive to the seasons and sunlight. We secrete a hormone called melatonin, which helps us sleep at night and stay awake during the day. Melatonin production is directly linked to sun

exposure. So, as the days get shorter during the winter, our bodies produce more and more melatonin and we can literally feel like going into a cave and hibernating.

Many SAD sufferers manage their seasonal depression with daily exposure to full-spectrum lamps or light boxes. By getting daily doses of natural light, they can fool their brains into thinking it's summertime, and their need to sleep decreases.

Recent research shows that timing these light therapy sessions to our natural biological clocks is even more beneficial than usage during the day. Exposure to natural spectrum bright light for thirty minutes on awakening is twice as effective as evening sessions, and one study found this practice actually had an 80 percent chance of sending SAD into remission.

If winter blues are getting to you, consider investing in a full spectrum

lamp and use it first thing in the morning--because SAD is for the bears.

Loosen the grip of seasonal affective disorder.

Hibernating is for the Bears

Plan to Stay Fit This Winter

Winter's here, and you've moved your running shoes to the back of the closet until April. Yet that piece of pumpkin pie has your name on it.

With the onset of colder weather, shorter days, and snow-covered streets, we eat more and exercise less, waiting for the spring thaw to get back in shape. Instead of having to make New Year's resolutions to lose holiday weight and join a health club, why not set goals to stay fit this winter?

MOVE FITNESS INDOORS

Winter is the perfect time to start a weight-training program. When it's sunny and warm in summer, you'd rather be outside cycling or rock climbing. When it's snowing, why not lift weights for 30 minutes during lunch? Statistics show that more people

suffer heart attacks in winter from shoveling snow, often because they're out of shape. With regular strength training, you'll be able to shovel that snow and get a head start with outdoor sports when spring comes around.

WALK OUTSIDE ON WEEKENDS

Going for a jog or walk during mid-day when the sun is high is a great time to get outside and catch a few rays. Be sure to dress warmly, wear sunscreen, and drink plenty of water. Dehydration is most common in colder months when you're less aware of fluid loss.

TAKE A DANCE CLASS

Accept that invitation to the New Year's Eve celebration and take a class in ballroom dancing. While you're dancing, you're not hanging around the buffet table or the bar, and your

waistline will thank you for it.

REDISCOVER ICE SKATING

Whether it's on a frozen pond or at a rink, ice skating provides seasonal exercise opportunities, especially good for the legs. And it's great fun, bringing out the kid in all of us.

CONSIDER SNOWSHOEING

Snowshoeing is just a matter of strapping snowshoes onto your boots and walking. Snowshoes make hiking trails and snowy city parks accessible and can be rented from sporting goods stores at a relatively inexpensive price.

*"Try to be a
rainbow in
someone's
cloud."*
